

DESIGNED TO MAKE A STYLISH IMPRESSION !

■ DESCRIPTION

Vertical heating elements are combined with other components of the interior in such a way to enable them to give a surplus value to their environment.

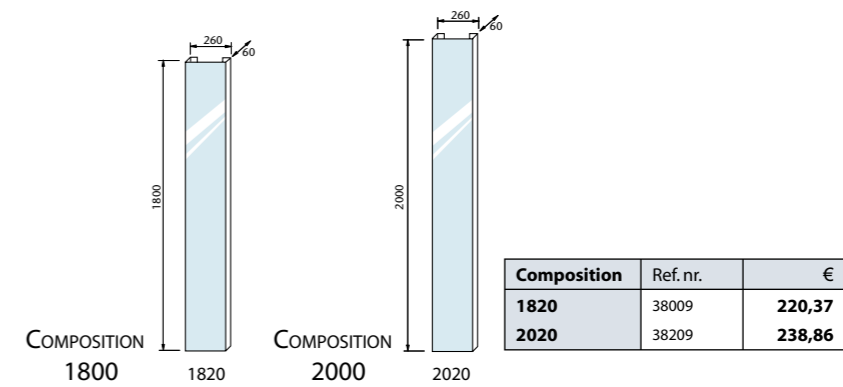

You can place the radiators (1 800 or 2 000 mm high, various widths) in different ways: as wall model, as free-standing installation or as corner model.

■ HOW TO ORDER?

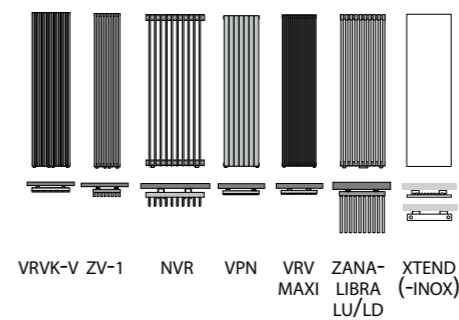

You choose your favourite composition e.g. 1820.
 You choose your favourite THERMIC-radiator from the 1800- or 2000-range.
 You do not need to specify whether the composition will be installed on the left or on the right. The SPHERE-line-modules can even be installed alongside an existing radiator. Clear mounting manuals and a template for the SPHERE-line-modules will be delivered together with the radiator.

For example:
 You order SPHERE-line-composition 1820.
 Reference nr. 38009
 Then choose and order the radiator height, width, colour, etc. you require.

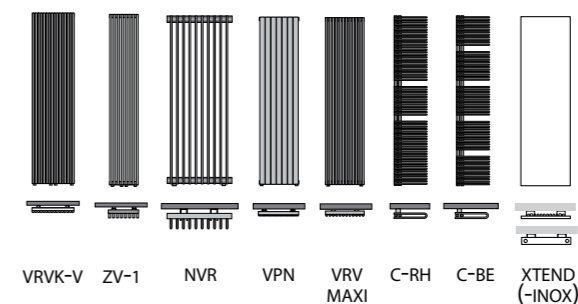

THERMIC offers a 2-year guarantee on the SPHERE-line-program and a 10-year guarantee (for the paintwork and against leakages) on the radiator.
